

	Environmental Management System Manual	S-01
TITLE	SCOPE OF MANNIONDANIELS ENVIRONMENTAL MANAGEMENT SYSTEM	
DATE	19/10/18	

*Specialist consulting services in developing countries, fragile and conflict-affected states. Relating to activities at the Head Office Location.*

The MannionDaniels Environmental Management System (EMS) has been designed to meet the requirements of the ISO14001 and all applicable legislation.

The EMS will cover all environmental aspects and impacts connected to the company's Bath based office work with our most significant aspects being the primary focus for monitoring, measurement and continual improvement, specifically:

- Flights undertaken by MannionDaniels core team to and from project locations
- Office based work in Bath –relating to electricity & energy usage, computer and connected equipment use, office purchasing/procurement, and disposal of office waste

With regards to project work, this is kept out of the scope of the EMS as there is currently no established way of measuring the aspects and impacts of this.

MannionDaniels is committed to providing its core team with relevant, up to date training and information relating to its EMS to ensure understanding of staff responsibilities and to promote a culture of resource efficiency.

*D. L. Daniel*
